These figures show geocoded addresses of the Spring 2011 GIS class in three different ways:

A. is geocoded to Charleston Country streets. (3 unmatched addresses that were outside of Charleston County)

B. is geocoded to the USA Street map. (2 unmatched to US streets that were built after the data collection.)

C. is geocoded to the new parcel data for Charleston County. (3 unmatched: 2 were outside Charleston County, 1 was connected to another address. 3 tied that had multiple locations for the same address.)
